

DESCRIPTION

Mewbourn 3 is a cryogenic natural gas processing plant in the DJ Basin. Mewbourn 3 will be DCP's tenth plant in the basin. Located at the existing site of DCP's Mewbourn Gas Plant, Mewbourn 3 will foster the development of oil and gas resources in Weld County by expanding and enhancing natural gas gathering and processing services in the area. The Mewbourn 3 project also includes the next phase of the Grand Parkway low pressure gathering and associated compression asset, which is also expected to be completed by the end of 2018. The Mewbourn 3 plant will connect to the Front Range Pipeline, one-third owned by DCP Midstream, for NGL takeaway to Mont Belvieu, Texas. Total capital investment for the plant and associated gathering is expected to be up to \$395 million.

- Business Segment: Gathering and Processing
- Region: North - DJ Basin
- Location: Weld County, Colo.
- Scope: A new deep cut, cryogenic natural gas processing plant and associated low-pressure gathering and compression systems
- Capacity: 200 million cubic feet per day (MMcf/d)
- Type of Project: Organic
- Ownership: 100 percent by DCP Midstream, LP
- Projected in-service date: Q4 2018
